Install vega-tools-rv32 toolchain

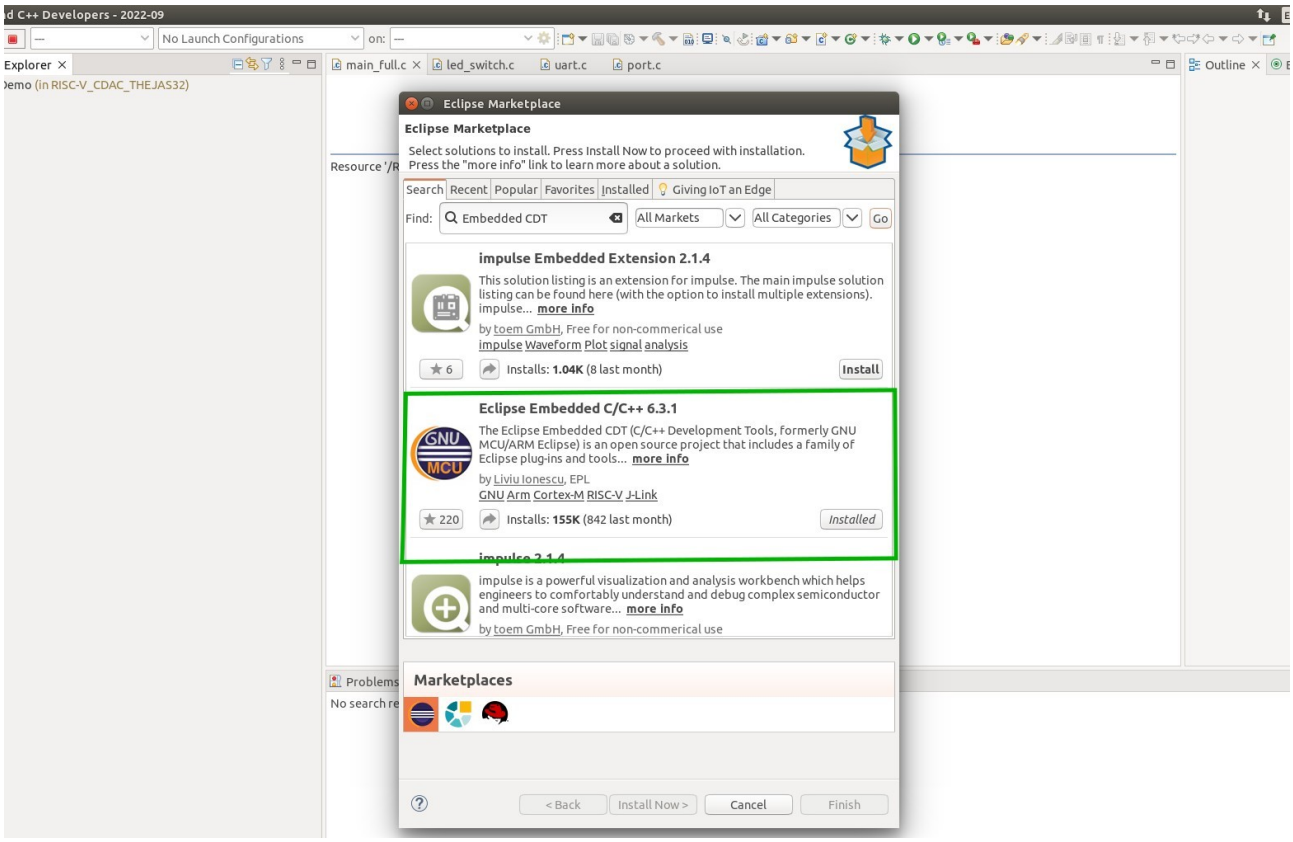

git clone https://gitlab.com/cdac-vega/vega-tools-rv32.git

After cloning setup the toolchain

cd vega-tools-rv32
./setup-env.sh

Install latest Eclipse IDE (Select C/C++ during installation)

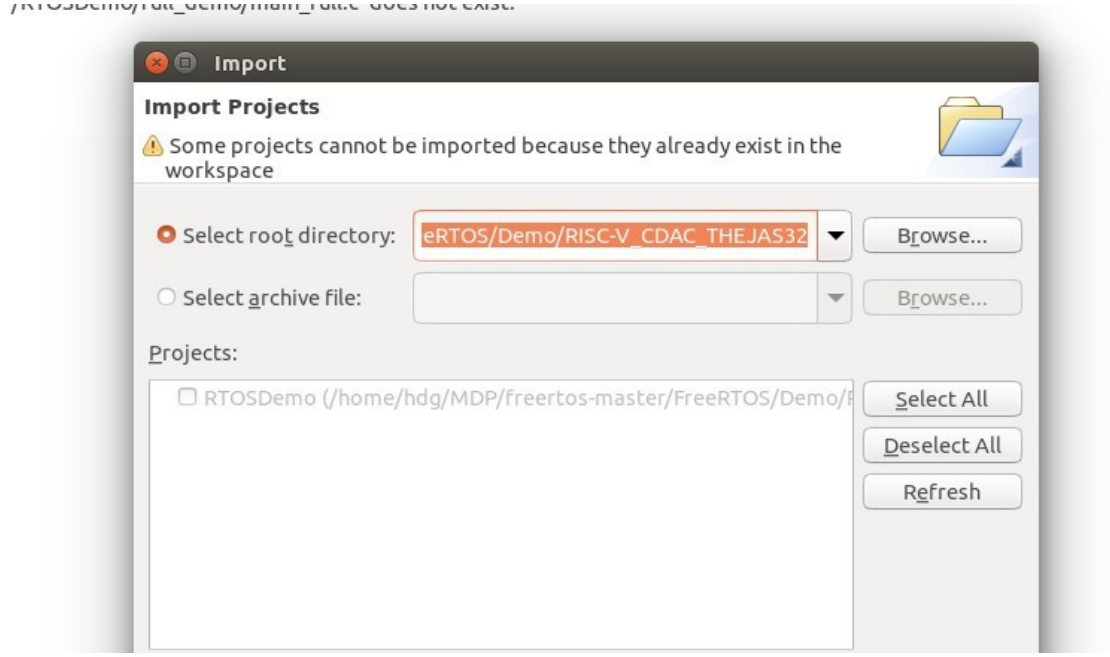

On 'Help->Eclipse Marketplace' search "Embedded CDT" and install

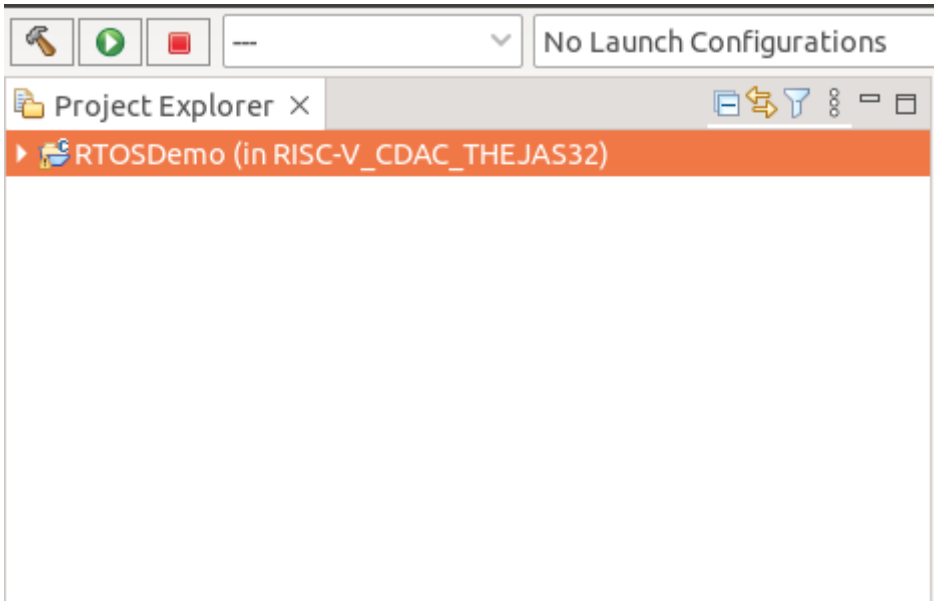

Go to Linux Terminal:
Clone the repository:

git clone https://gitlab.com/riscv-vega/operating-systems/freertos-thejas32.git

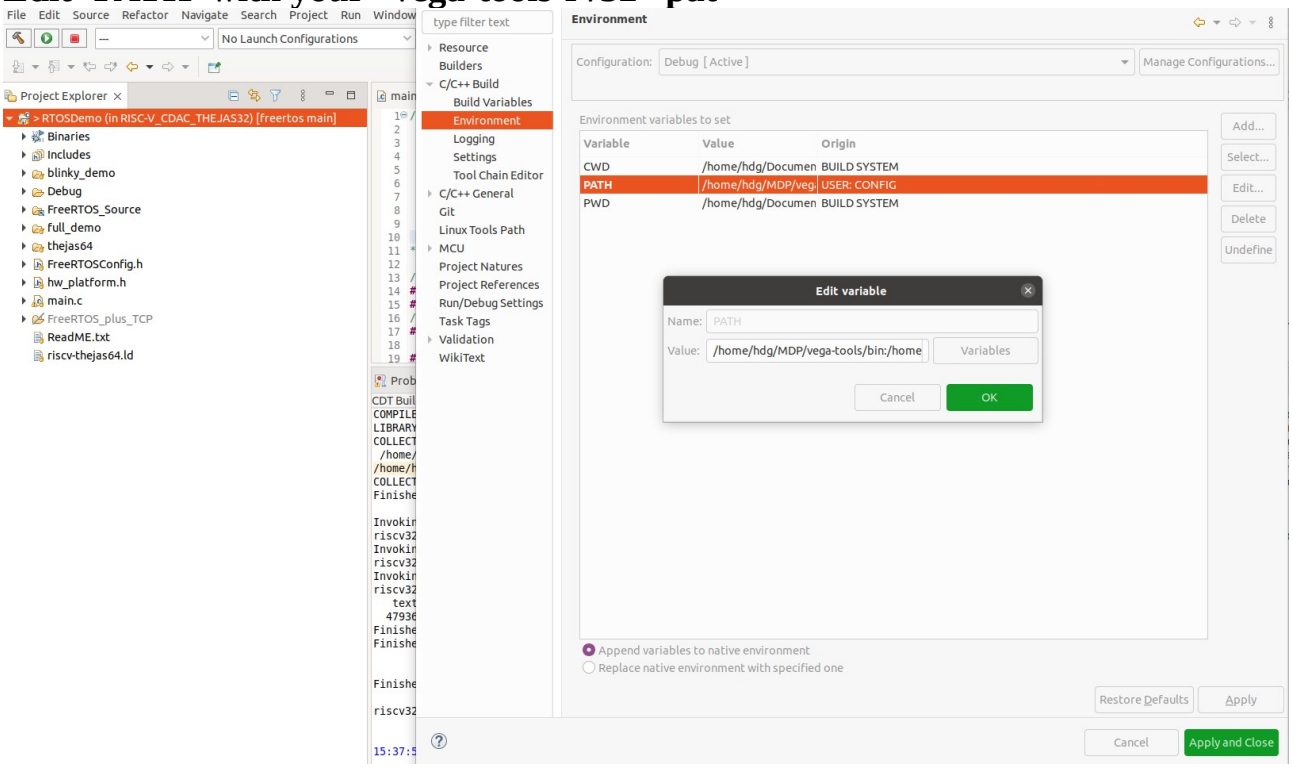

Go to Eclipse IDE:
File->Import.->general->Existing Project into workspace
Select FreeRTOS/Demo/RISC-V_CDAC_THEJAS32 folder

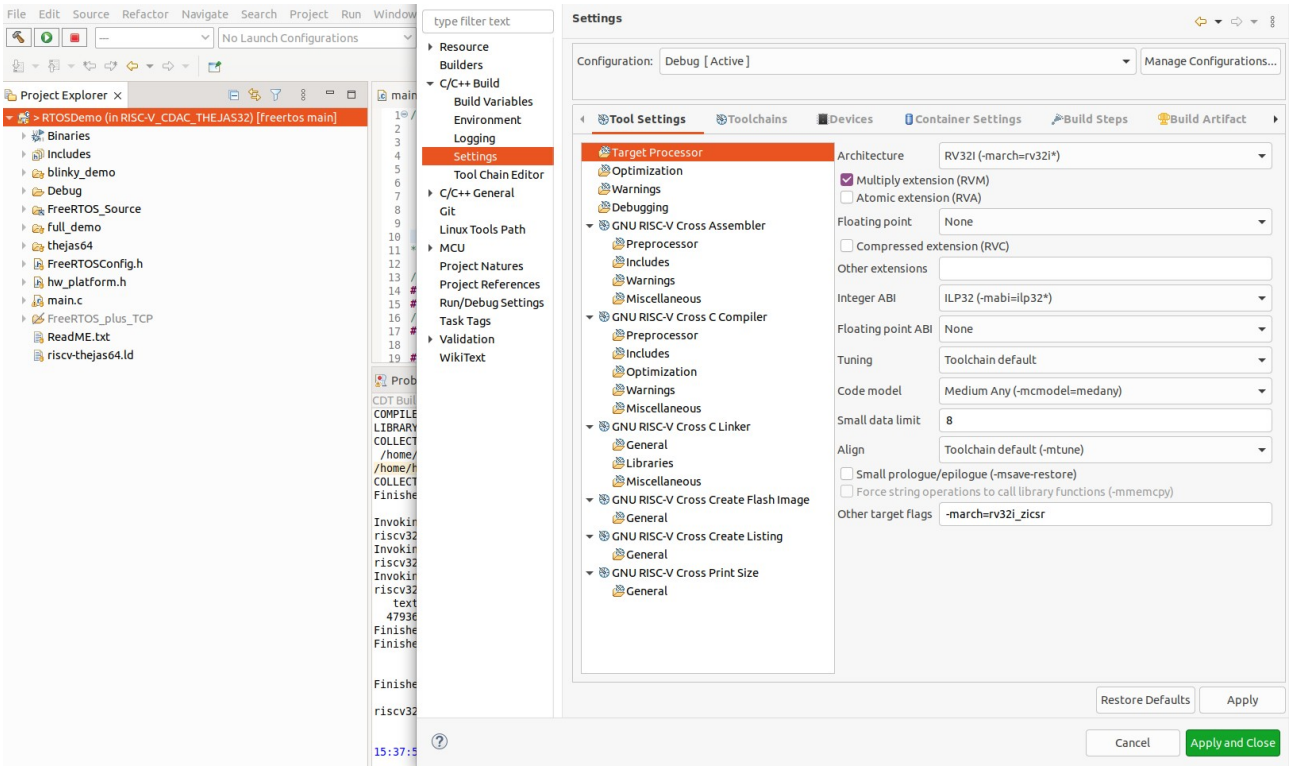

Right Click Project 'RTOSDemo' -> Properties

C/C++ Build → Environment
Edit 'PATH' with your "vega-tools-rv32" pat

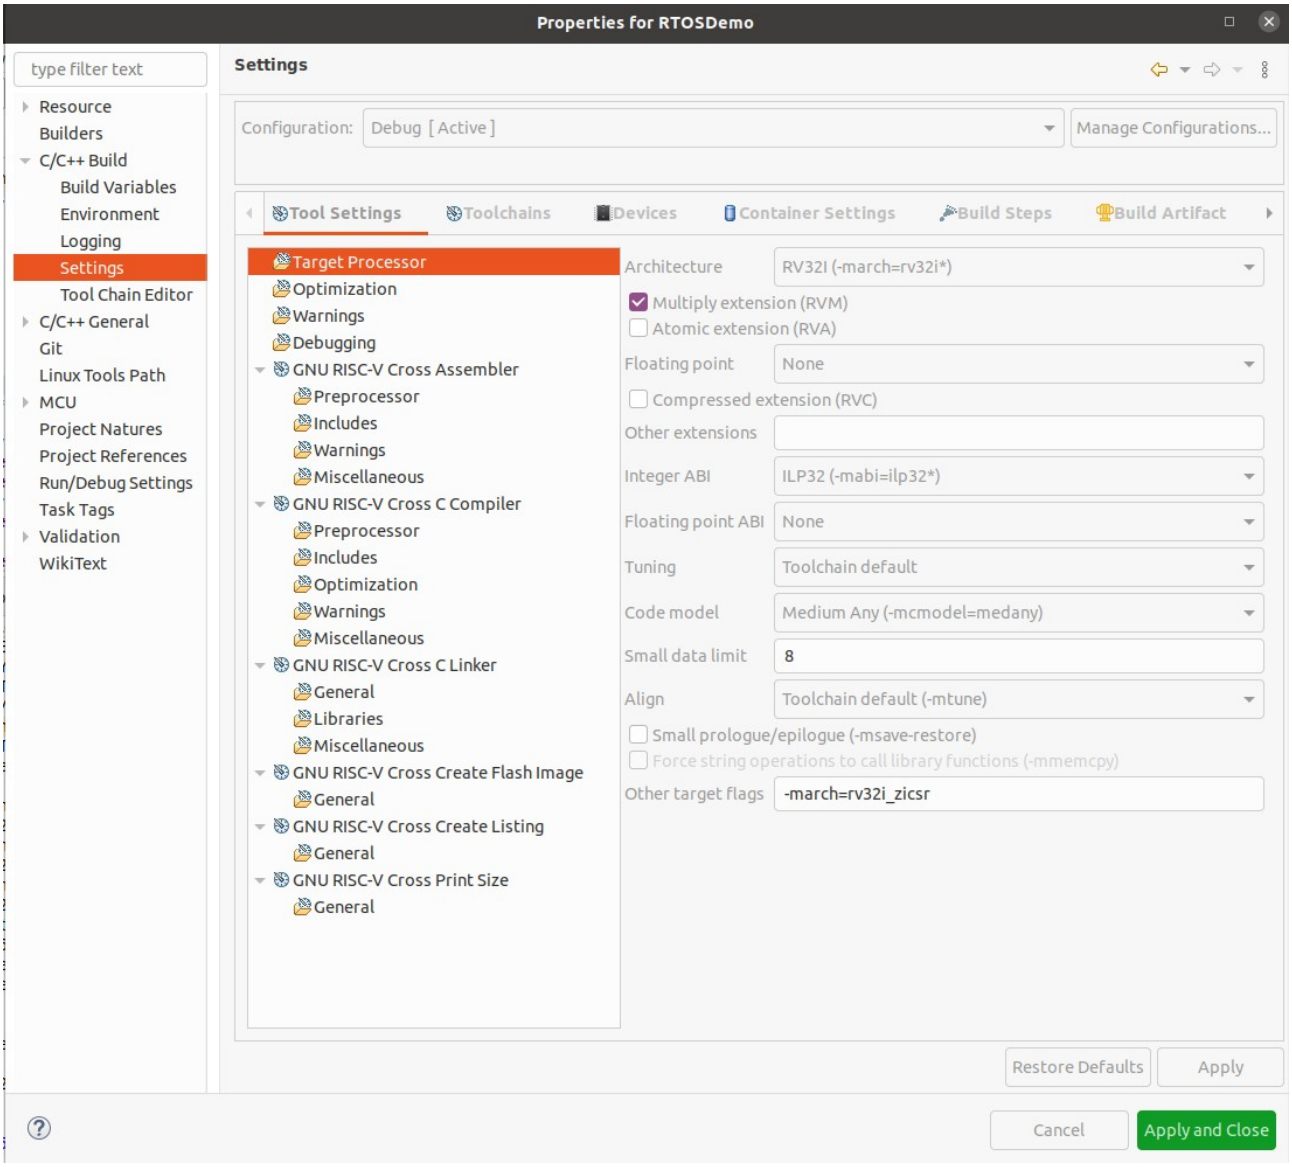

After edit the path of vega-tools-rv32
go to c/c++ build →settings

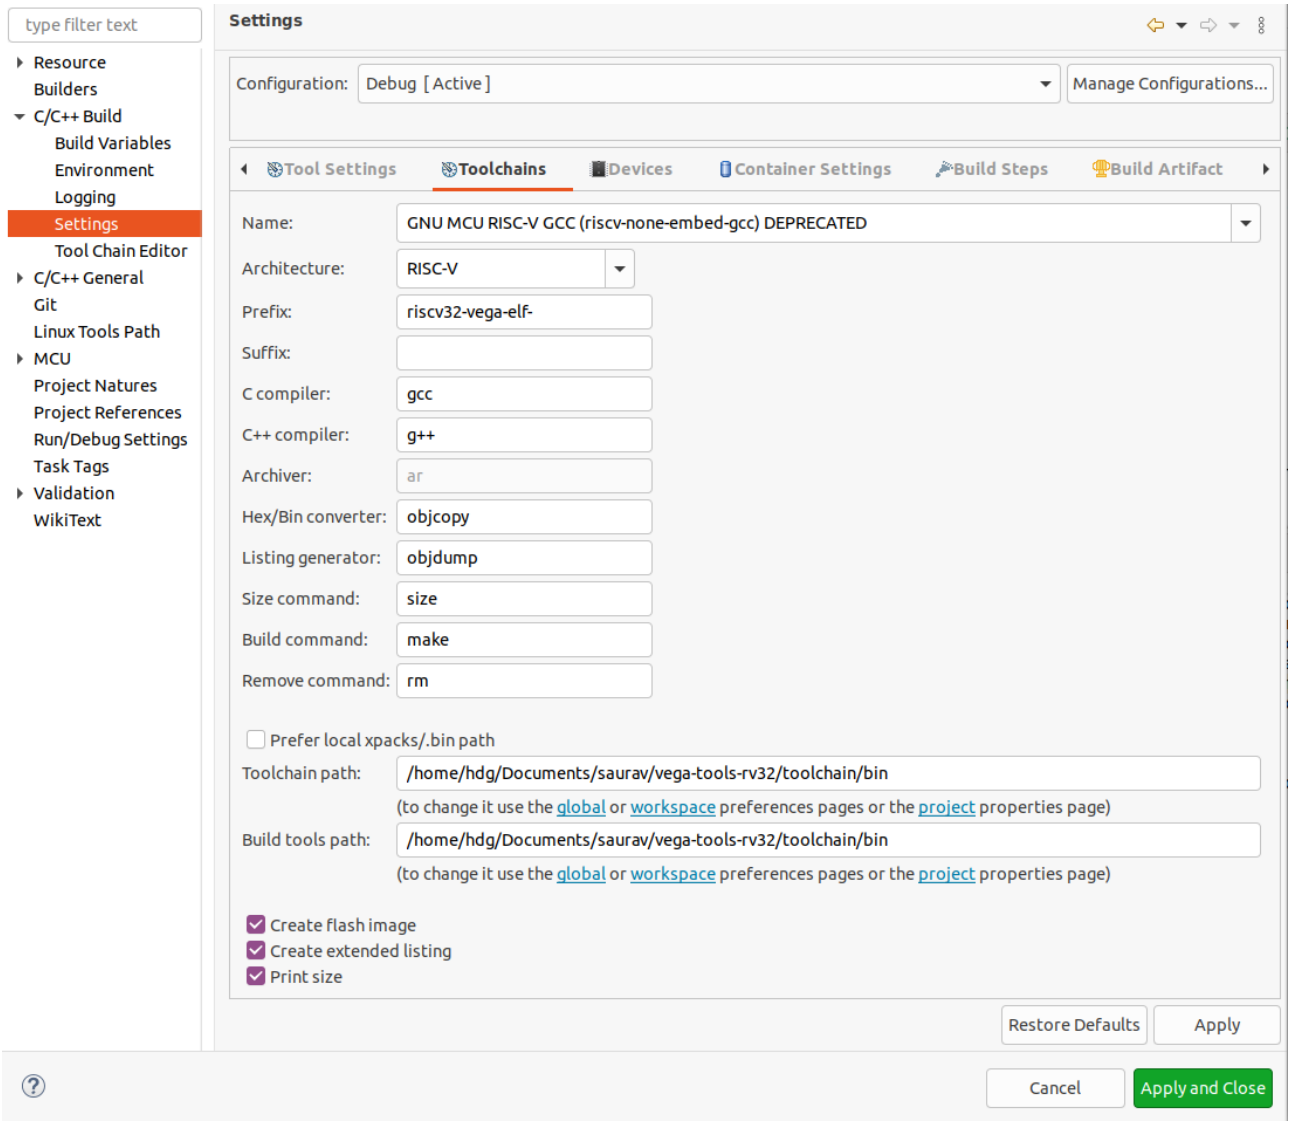

In c/c++build-->settings-->under ‘tool settings’--->target processor

add flag -march=rv32i_zicsr (shown in below image).

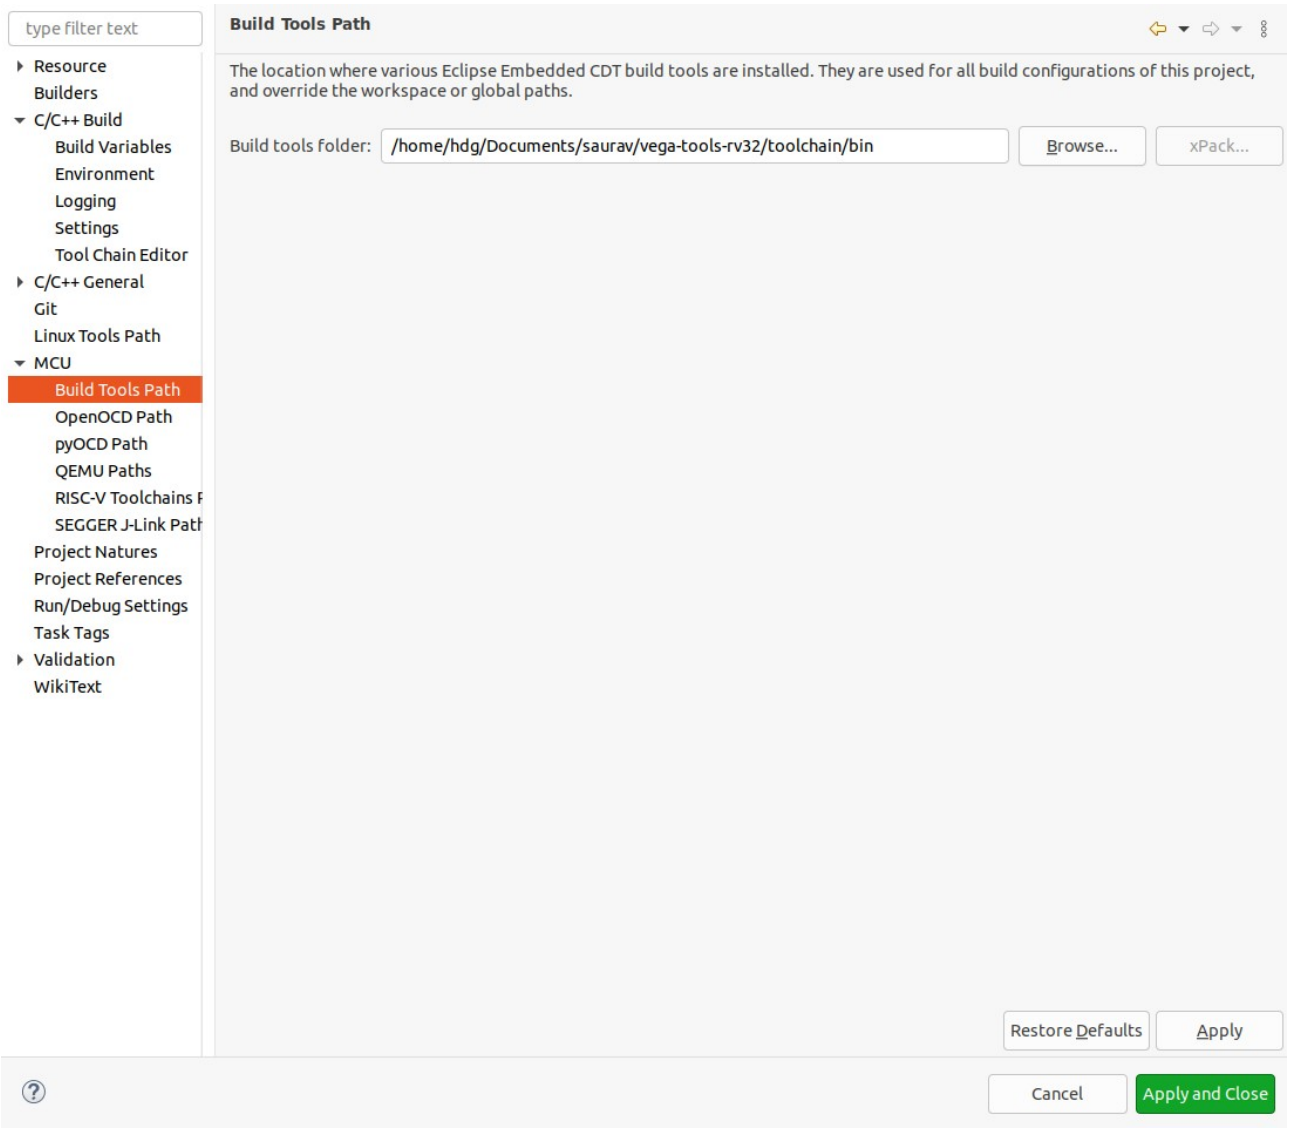

Then In c/c++build-->settings-->under ‘toolchains’

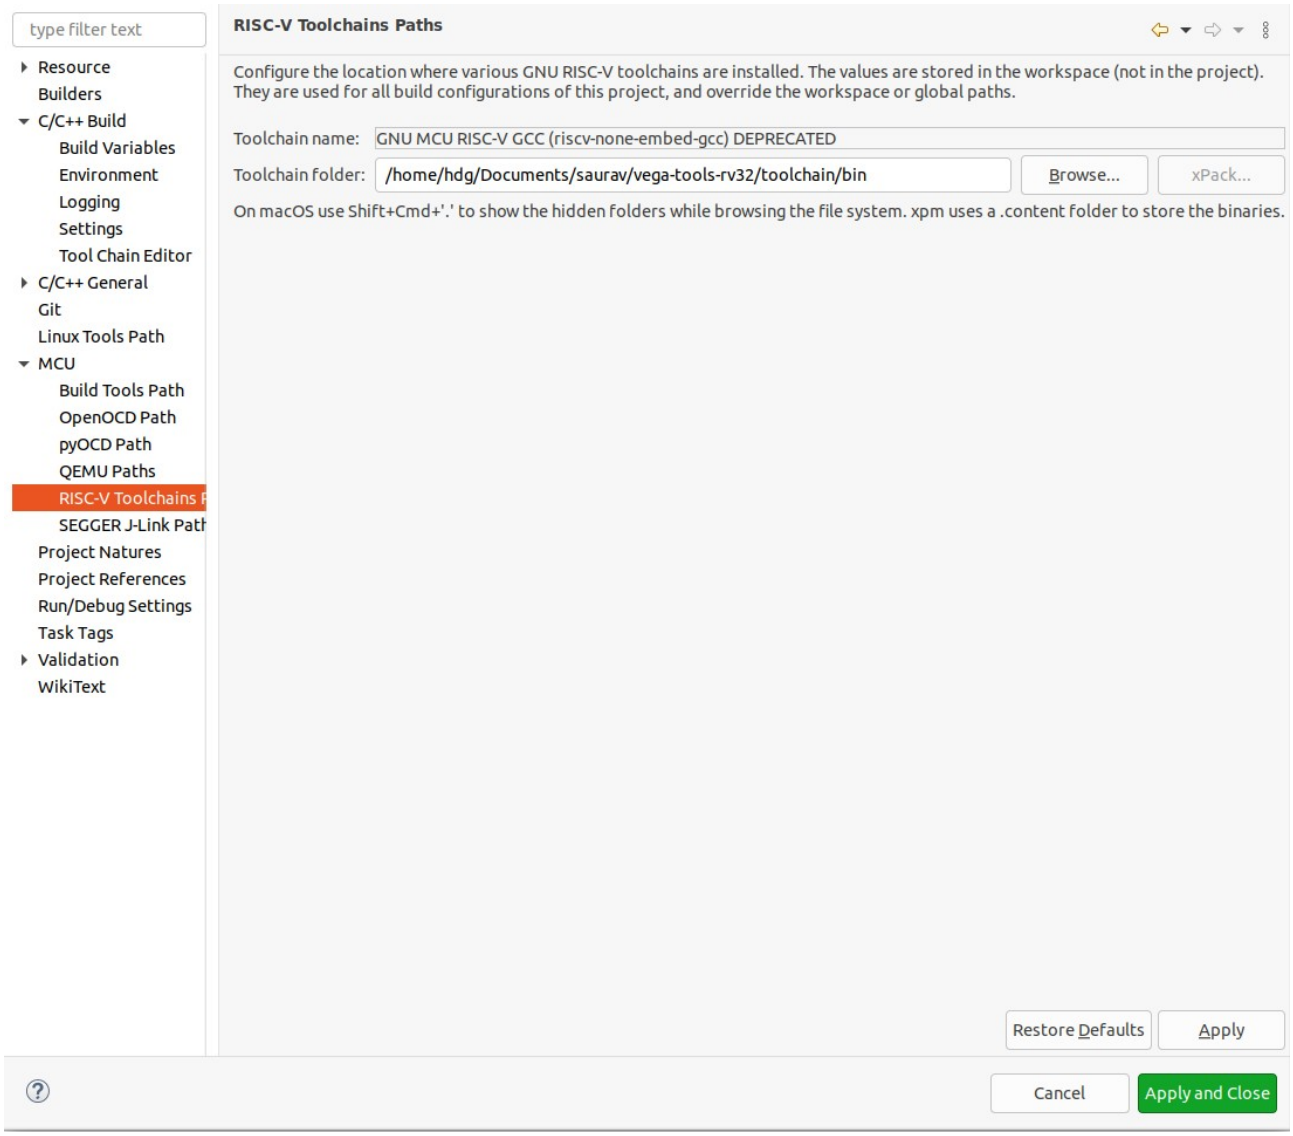

prefix shoud be ---> riscv32-vega-elf

MCU → Build Tools Path → Browse “vega-tools-rv32” path

MCU → RISC-V Toolchains Paths → Browse “vega-tools” path

After all this,

clean and build
